AMF colonization against fava biomass, by water level and inoculation
Per pot, n = 5 per symbol group per panel. Lines and 95% CI from one model per row (fava x inoculation + water).
Control (80% FC)
Moderate (60% FC)
Severe (40% FC)
Any fungal structure
Arbuscules
Vesicles
Inoculated slope p = 0.949
Sterile slope p = 0.822
Inoculated slope p = 0.387
Sterile slope p = 0.107
Inoculated slope p = 0.695
Sterile slope p = 0.233
