Wheat allocation and biomass against fava biomass, wheat/ fava intercrop
Per pot, n = 10 per panel. Line = pooled fit with 95% CI; filled = inoculated, open = sterile.
Control (80% FC)
Moderate (60% FC)
Severe (40% FC)
slope p = 0.357 (pooled)
slope p = 0.175 (adj. for Inoc)
slope p = 0.638 (pooled)
slope p = 0.297 (adj. for Inoc)
slope p < 0.001 (pooled)
slope p < 0.001 (adj. for Inoc)
slope p = 0.690 (pooled)
slope p = 0.764 (adj. for Inoc)
slope p = 0.297 (pooled)
slope p = 0.460 (adj. for Inoc)
slope p = 0.734 (pooled)
slope p = 0.747 (adj. for Inoc)
Berry allocation (proportion of wheat NPP)
Wheat biomass (g per pot)
Fava biomass (g per pot)
Inoculated
Sterile
