AMF colonization against fava biomass, inoculated pots only
Per pot, n = 15. Line = simple fit with 95% CI; shape = water level. Sterile pots (contamination only) omitted.
Any fungal structure
slope p = 0.868 (pooled)
slope p = 0.660 (adj. for water)
Arbuscules
slope p = 0.510 (pooled)
slope p = 0.504 (adj. for water)
Vesicles
slope p = 0.718 (pooled)
slope p = 0.761 (adj. for water)
