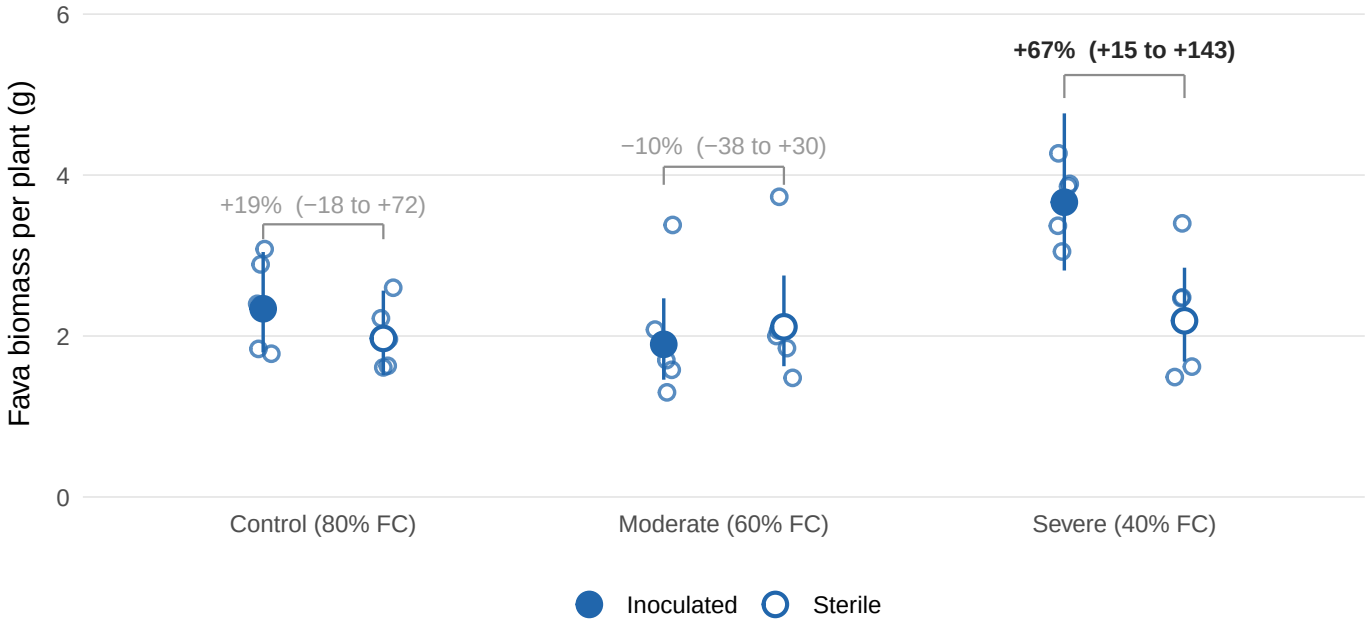
A

Fava biomass

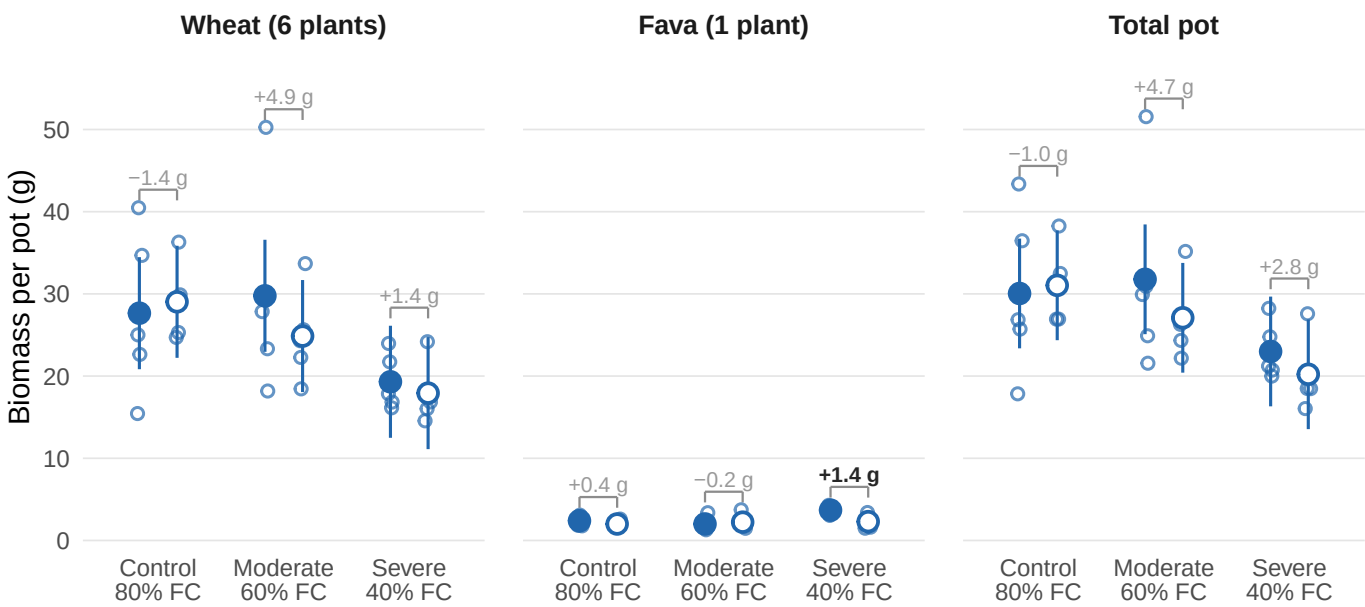
% change with inoculated vs sterile wheat (95% CI). Inoculation x water: p = 0.069.



B

Pot composition

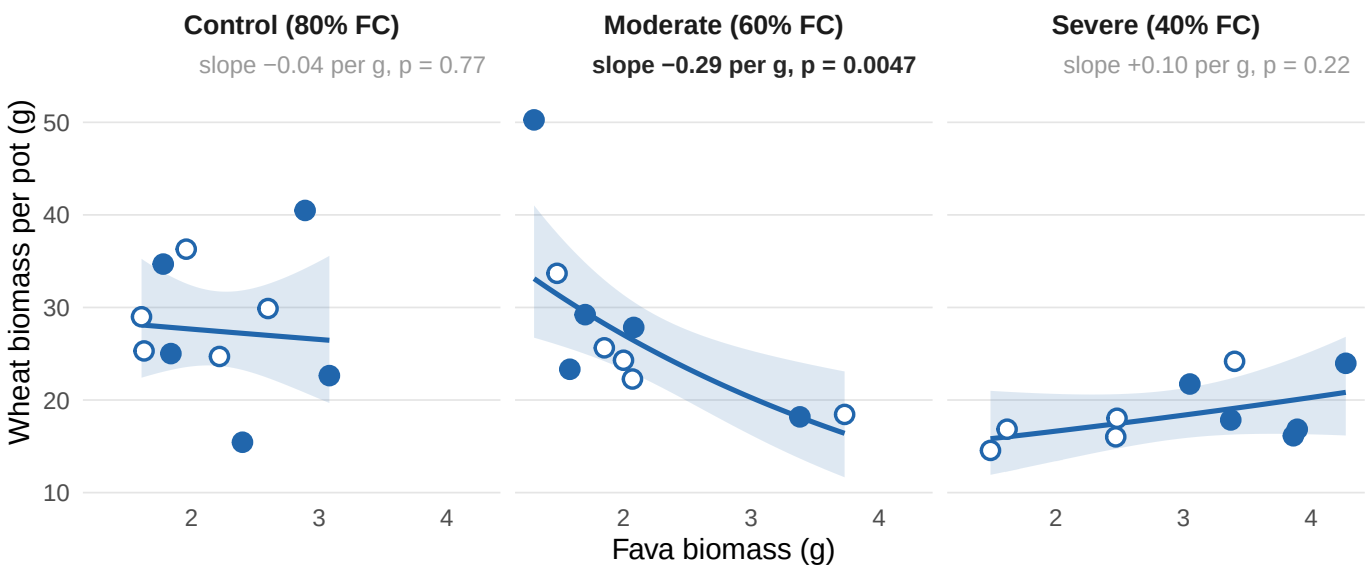
Same axis in every panel. Labels: change with inoculation (g); bold if the 95% CI excludes zero.



C

Wheat vs fava (non−causal)

Line: fit from log(wheat) ~ fava x water, 95% CI. Slopes on the log scale.



Exploratory. CIs and p−values unadjusted. n = 5 pots per group (n = 10 per water level in C).
