Fava as an explanatory variable within each inoculation treatment
Per pot, n = 15 per panel (x−axes differ by panel). Line = pooled fit with 95% CI; shape = water level.
Inter − inoculated
Inter − sterile
slope p = 0.093 (pooled)
slope p = 0.347 (adj. for water)
slope p < 0.001 (pooled)
slope p = 0.013 (adj. for water)
slope p = 0.005 (pooled)
slope p = 0.144 (adj. for water)
slope p = 0.017 (pooled)
slope p = 0.358 (adj. for water)
Berry allocation (proportion of wheat NPP)
Wheat biomass (g per pot)
Fava biomass (g per pot)
Control (80% FC)
Moderate (60% FC)
Severe (40% FC)
